

Tree plantation and Cyber Crime Lecture

On 9th March 2024, Baba Mastnath University organized a unique event under the National Service Scheme (NSS) of the Faculty of Humanities, combining two vital themes—Tree Plantation and a Guest Lecture on Cyber Crime. Convened by Dr. Manjeet Kumar and co-convened by Dr. Vijay Dangi, the event featured Mr. Dayanand Jangra, Sub-Inspector of Cyber Crime, Rohtak, as the esteemed guest speaker. With the participation of 65 attendees, the program aimed to foster environmental responsibility and raise awareness about the growing challenges of cyber crime, making it a meaningful initiative that merged environmental and technological consciousness.

The event began with a tree plantation drive, symbolizing the university's commitment to environmental preservation. Faculty members and students actively participated in planting saplings, emphasizing the importance of afforestation and its role in combating climate change. Following the plantation drive, Mr. Dayanand Jangra delivered an insightful lecture on cyber crime, shedding light on the various forms of online threats, preventive measures, and the role of law enforcement in addressing cyber-related issues.

The lecture offered practical advice on digital safety, cyber hygiene, and the legal framework surrounding cyber crimes in India, engaging participants in a discussion on the importance of

responsible digital behavior. The coordinators ensured smooth conduct of both activities, encouraging active participation and interaction from attendees.

The event highlights the pressing need to address two critical aspects of contemporary society—environmental sustainability and cybersecurity. Tree plantation drives contribute significantly to SDG 13 (Climate Action), SDG 15 (Life on Land), and SDG 11 (Sustainable Cities and Communities) by promoting afforestation, biodiversity, and urban greening. Concurrently, the cyber crime lecture aligned with SDG 16 (Peace, Justice, and Strong Institutions) by fostering awareness about the importance of safe and secure digital environments. By integrating these two themes, the event reinforced the message that both environmental preservation and digital responsibility are essential for building a sustainable and secure future for all.

The event saw enthusiastic participation from 65 students and faculty members, who actively engaged in the plantation drive and the interactive lecture. The tree plantation drive not only contributed to the university's green initiatives but also encouraged participants to take ownership of environmental stewardship. The lecture on cyber crime empowered attendees with knowledge and tools to navigate the digital world securely, leaving a lasting impact on their understanding of personal and societal cybersecurity.

The combined initiative of Tree Plantation and a Cyber Crime Lecture at Baba Mastnath University was a testament to the institution's commitment to holistic development, encompassing environmental sustainability and digital safety. By addressing the dual priorities of ecological well-being and cybersecurity, the event reaffirmed the university's role in fostering informed and responsible citizens who are well-equipped to tackle the challenges of the 21st century. The event served as a reminder that protecting both the environment and digital spaces is crucial for creating a sustainable and equitable society.
